## General description

**Phone Wallet Software** allows to keep safe your confidential information like passwords, logins and your financial information on your mobile phone in a very flexible, user defined way.

In order to install PhoneWallet version 2.0 and to keep all your data from version 1.0 you should do the following:

### **1. Data Backup**

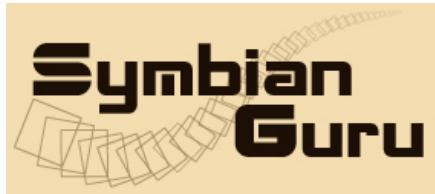

You can backup all data from your Phone Wallet v1.0 software and transfer it to PhoneWallet v.2.0. You should install the patch file of PhoneWallet software, backup data and restore it with the help of new feature in PhoneWallet v.2.0.

### **2. Patch file installation**

At first you should install the patch file of PhoneWallet software, which can be requested via email by SymbianGuru. After installation of this file you should enter the software and will be prompted to backup all your data.

After patch file installation you enter the software and in order to backup your data you need to enter the correct password of your Phone Wallet 1.0 application:

[support@symbianguru.com](mailto:support@symbianguru.com)

After entering the password you need to choose the memory storage where your backup will be stored. After that you will have to select the target storage of this file. When you have memory card you will have the following screen message:

In case the Memory card is not available, you will be able to backup your data only to Phone memory, and the screen will have the following view:

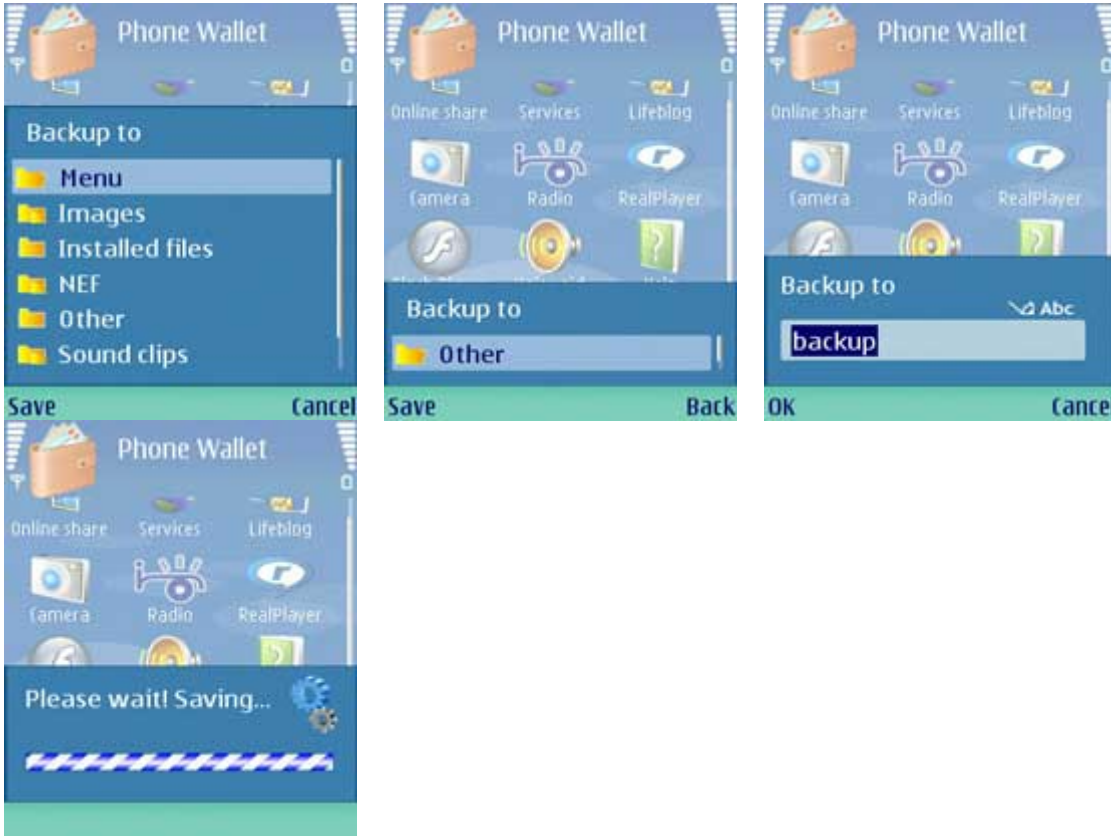

In case the destination chosen is Phone memory, you also have to select the folder from the list of available and then enter the name of the file and wait till your data get stored:

#### **4. Uninstall the PhoneWallet v.1.0**

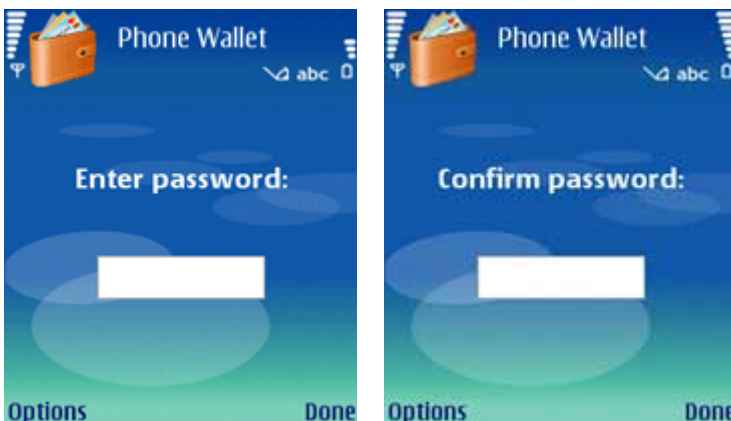

After you backup all your data of PhoneWallet v.1.0 you will have to uninstall Phone Wallet 1.0 in order to be able to install Phone wallet 2.0 and to be able to use the new version without problems.

**Reboot the phone after the uninstall!**

#### **3. PhoneWallet v.2.0 installation**

Now you are ready to install the Phone Wallet 2.0.

You should transfer the Phone Wallet 2.0 SIS to your mobile phone and install it. After installation you should set the password for the new version of the software and confirm it.

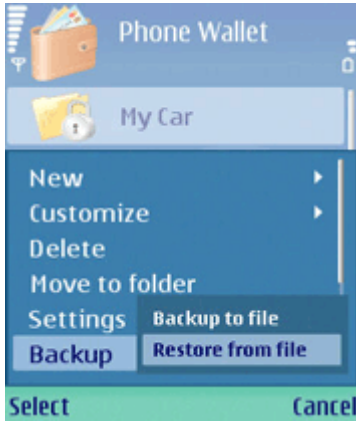

After that you will receive the empty folders with no data inside. To recover all your data from version 1.0 quickly, you should press Options – Backup – Restore from file option.

[support@symbianguru.com](mailto:support@symbianguru.com)

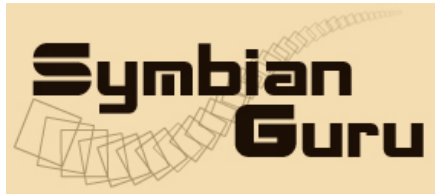

After that you will have to choose the storage, where your backup was stored. In case your backup was stored on memory card and your memory card is available you will have the following:

In case the Memory card is not available, you will be able to restore your backup file only from Phone memory, and the screen will have the following view:

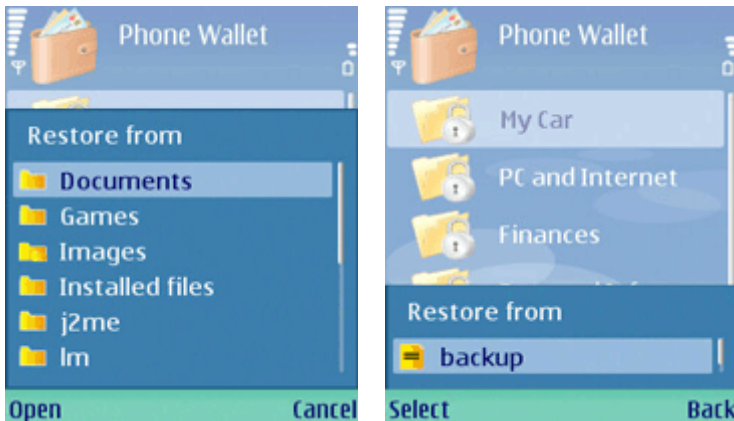

SymbianGuru.com Your guru in mobile software.

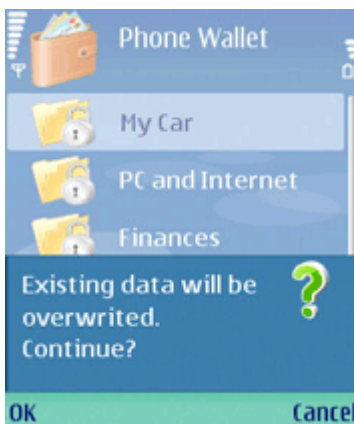

[www.symbianguru.com](http://www.symbianguru.com)

[support@symbianguru.com](mailto:support@symbianguru.com)

After that you will have to choose the folder where your backup file was stored:

After that you were asked if you are sure that all your previous data will be stolen and everything will be overwritten. As if you will have no data inside, you will have nothing to overwrite, so press OK.

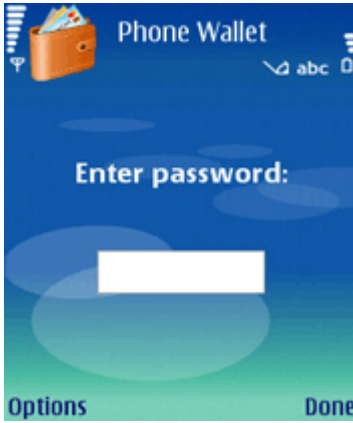

After pressing Ok button you will be prompted to enter the right password to Phone Wallet 1.0 software
